

VIRCOM
TRUST YOUR EMAIL. TODAY. FOREVER.

www.vircom.com

- Since 1995
- First email assurance technology specialist
- Major supplier to service provider and corporate IT users
- Millions of mailboxes protected
- Award-winning Modus™ email assurance technology
- Innovator, not imitator
- Proprietary technology (not available to spammers)

Vircom: The first name in email assuranceSM technology.

Vircom is a long established, award-winning, email assurance think tank. The first developer to specialize on email assurance products, they have continued to provide secure email assurance solutions for service providers and corporate IT facilities all over the world.

Innovators. Not Imitators

There are many new anti-spam and so-called “email security” software packages and vendors to choose from. Many use conventional anti-spam code based on the Open Source Initiative, warmed over to make a “new” proprietary package. That’s fine. But while most have essentially the same capabilities – they also have essentially the same limitations. *One issue is that Open Source technology is an open-book to spammers. But a larger issue is that there is more to email assurance than just anti-spam or anti-virus. Vircom’s Modus technology is designed to address spam, virus and policy threats but also to be able to quickly adapt to new threats as they emerge.* Vircom is decidedly different.

Vircom has more email assurance experience than any other provider. It has independently created award-winning email security and assurance solutions since 1995. Originally, Vircom’s technology was directed at the industrial-strength needs of service providers. Now, however, Vircom technology is available to both large and small users for both high volume and low volume application. All of Vircom’s experience and innovation is now carefully integrated in its Modus™ Smart Email Assurance technology. Embedded in all of Vircom’s products, Modus has demonstrated in test after test, a 98+% accuracy in email threat identification and up to 99.99% protection against false-positives. That kind of performance is essential to trusting your email.

Trust Your Email. Today. Forever

Vircom recognizes that email communications are now at the very core of your business. If you can’t have confidence in your email, then your users *can’t* have confidence in a large and growing part of their entire corporate communications infrastructure. You simply cannot afford to let your email communications be compromised or threatened by anything: not viruses, not spam, not phishing, not fraud, or out-of-policy communications. Now, or ever. It’s that important.

Customer Experience

Vircom has more than a thousand customers all around the world representing every industry and representing both service providers and corporate or institutional users. Typical customers include:

“I’m talking ZERO spam... Life is good.”

David Lindsay, SVIC.net

Services

Vircom provides its customers with a variety of support service plans. Vircom’s standard “Silver Care” plan includes telephone support during normal business hours (9am to 6pm), automatic upgrades to anti-spam and anti-virus, hot fixes, and products upgrades. Vircom’s “Gold Care” plan is available to expand this offering to 24/7 emergency support including a guaranteed 30-minute callback time. Anti-virus and spam definitions auto-update on a 24/7 basis. Free subscriptions are available to Vircom’s technical bulletins and Knowledge Base. Installation and initial configuration assistance are available through remote service for a fee. Migration support and conversion planning services are also available for a fee.
